

Great Resources on www.Give2MenACWY.org to Help Protect Preteens and Teens from Meningococcal A, C, W, Y Disease

- ▶ Meningococcal conjugate vaccine (MenACWY) provides safe and effective protection against meningococcal disease caused by serogroups A, C, W, and Y.
- ▶ MenACWY is recommended at ages 11–12 followed by a second (booster) vaccination at age 16.
- ▶ According to CDC's 2017 National Immunization Survey–Teen, **only 44% of teens had received their recommended booster dose by 17 years of age.**

Valuable Resource! Downloadable slide deck and speaker notes for healthcare professionals
