Influenza usually comes on suddenly. Symptoms can include high fever, chills, headaches, exhaustion, sore throat, cough, and all-over body aches. Some people say, “It felt like a truck hit me!” Symptoms can range from mild to severe. When influenza strikes your family, the result is lost time from work and school and, possibly, doctor visits and trips to the hospital.

An infected person can spread influenza when they cough, sneeze, or just talk near others. Some people might get flu by touching a surface contaminated with the flu virus and then touching their own mouth, nose, or eyes. People infected with flu don’t have to feel sick to be contagious — they may even spread the flu virus to others the day before they have symptoms.

Each year in the U.S., from 140,000 – 810,000 people are hospitalized and from 12,000 – 61,000 people die from influenza and its complications. The people most likely to be hospitalized and die are infants, young children, older adults, and people of all ages who have conditions such as heart or lung disease. But it’s not only the youngest, oldest, or sickest who die: every year influenza kills people who were otherwise healthy.

There’s no substitute for yearly vaccination in protecting the people you love from influenza. Vaccination will help keep you and your loved ones safe from a potentially deadly disease. Get vaccinated every year, and make sure your children and your parents are vaccinated, too.

Get vaccinated every year! Get your children vaccinated! Be sure your parents get vaccinated, too!
