JYNNEOS™ is indicated for the prevention of smallpox virus infection in individuals 18 years of age and older.

4. Precautions

- Potential for the development of myocarditis (including pericarditis, myocarditis, and coronary artery syndrome), a rare but serious side effect, has been reported following administration of JYNNEOS™.

- Myocarditis has involved patients with underlying medical conditions, including diabetes, obesity, and hypertension.

- JYNNEOS™ is not indicated for the prevention of monkeypox virus infection.

5. Using Precautions

- The occurrence of myocarditis is rare and has been reported in rare cases following JYNNEOS™ administration.

- If you experience symptoms such as fever, chills, or rash, seek medical attention immediately.

- People with certain medical conditions, such as heart disease, may be at higher risk.

6. Vaccine Adverse Event Reporting System (VAERS)

- Report any adverse events following vaccine administration to VAERS (800-822-7967)

- Visit www.vaers.hhs.gov for more information.

7. Additional Information

- For more information, visit www.fda.gov/vaccines-blood-biologics/vaccines

- The Countermeasures Injury Compensation Program (CICP) is available to help cover certain medical expenses related to vaccine-related injuries.
