

वयस्कहरूका लागि खोपहरू लगाउन विरोधाभासका लागि परीक्षण जाँच सूची

तपाईंको नाम _____

जन्म मिति _____ / _____ / _____
महिना दिन वर्ष

बिरामीहरूका लागि: तलका प्रश्नहरूले हामीलाई आज तपाईंलाई कुन-कुन प्रतिरक्षण खोपहरू दिन सकिन्छ भनेर निर्धारण गर्न मद्दत गर्ने छ। तपाईं कुनै पनि प्रश्नको जवाफ "हो" मा दिनुहुन्छ भने, यसको अर्थ तपाईंले खोप लगाउनु हुँदैन भन्ने हो। यसको अर्थ हामीले तपाईंलाई थप प्रश्नहरू सोध्न आवश्यक छ भन्ने हो। प्रश्न स्पष्ट छैन भने, कृपया यसको बारेमा व्याख्या गर्नका लागि आफ्नो स्वास्थ्य सेवा प्रदायकलाई अनुरोध गर्नुहोस्।

	हो	होइन	थाहा छैन
1. तपाईं आज बिरामी हुनुहुन्छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
2. तपाईंलाई औषधि, खाना, भ्याक्सिन कम्पोनेन्ट वा लेटेक्सबाट एलर्जी छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
3. तपाईंलाई कहिल्यै खोप लगाएपछि गम्भीर प्रतिक्रिया देखिएको छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
4. तपाईंलाई निम्नमध्ये कुनै पनि छ: हृदय, फोक्सो, मृगौला वा मेटाबोलिक रोग (जस्तै, मधुमेह), दम, रक्त विकार, प्लीहा छैन, कोक्लियर इम्प्लान्ट वा स्पाइनल फ्लुइड चुहावटको साथ दीर्घकालीन स्वास्थ्य समस्या? तपाईं दीर्घकालीन एस्पिरिन थेरापीमा हुनुहुन्छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
5. तपाईंलाई क्यान्सर, ल्युकेमिया, HIV/AIDS वा अन्य कुनै प्रतिरक्षा प्रणालीको समस्या छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
6. तपाईंका आमाबुवा, दाजु-भाइ वा दिदि-बहिनीलाई रोग प्रतिरोधात्मक क्षमतामा समस्या छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
7. पछिल्लो 6 महिनामा, तपाईंले आफ्नो प्रतिरक्षा प्रणालीलाई असर गर्ने औषधीहरू लिनुभएको छ, जस्तै प्रेडनिसोन, अन्य स्टेरोइडहरू वा एन्टीकेन्सर औषधिहरू; रुमेटोइड गठिया, क्रोहन रोग वा सोरायसिसको उपचारका लागि औषधिहरू; वा तपाईंले विकिरण उपचारहरू गर्नुभएको छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
8. तपाईंलाई मस्तिष्क वा अन्य स्नायु प्रणालीमा समस्या भएको छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
9. तपाईंलाई कहिल्यै मुटुको समस्या (मायोकार्डिटिस वा पेरिकार्डिटिस) भएको पत्ता लागेको छ वा कोभिड-19 को कारण बन्ने भाइरसको संक्रमणपछि तपाईंलाई मल्टिसिस्टम इन्प्लेमेन्टरी सिन्ड्रोम (MIS-A वा MIS-C) भएको छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
10. गत वर्षमा, तपाईंले प्रतिरक्षा (गामा) ग्लोब्युलिन, रक्त / रक्त उत्पादन वा एन्टिवायरल औषधि प्राप्त गर्नुभएको छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
11. तपाईं गर्भवती हुनुहुन्छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
12. तपाईंले गत 4 हप्तामा कुनै खोप लगाउनुभएको छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
13. तपाईंले खोप लगाउनुअघि, खोप लगाउँदा वा लगाइसकेपछि चक्कर लागेको वा बेहोस भएको महसुस गर्नुभएको छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>
14. तपाईं आज खोप लगाउन चिन्तित हुनुहुन्छ?	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

फारम द्वारा पूरा _____ गरियो _____

फारम द्वारा समीक्षा गरिएको _____ गरियो _____

तपाईंले आफ्नो खोप रेकर्ड कार्ड साथमा ल्याउनुभएको थियो? हो होइन

तपाईंको खोपको व्यक्तिगत रेकर्ड हुनु महत्वपूर्ण छ। तपाईंसँग व्यक्तिगत रेकर्ड छैन भने, तपाईंको स्वास्थ्य सेवा प्रदायकलाई तपाईंलाई उक्त रेकर्ड दिन अनुरोध गर्नुहोस्। यो रेकर्डलाई सुरक्षित स्थानमा राख्नुहोस् र तपाईं चिकित्सा स्याहार खोज्दा प्रत्येक पटक यसलाई आफ्नो साथमा ल्याउनुहोस्। तपाईंको स्वास्थ्य सेवा प्रदायकले यसमा तपाईंका सबै खोप रेकर्ड गर्नुहुन्छ भनी सुनिश्चित गर्नुहोस्।

Information for Healthcare Professionals about the Screening Checklist for Contraindications to Vaccines for Adults

Read the information below for help interpreting answers to the screening checklist. To learn even more, consult the references in Note below.

NOTE: For additional details, see CDC's "Adult Immunization Schedule" (www.cdc.gov/vaccines/schedules/hcp/imz/adult.html) and *General Best Practice Guidelines for Immunization* sections on "Contraindications and Precautions" (www.cdc.gov/vaccines/hcp/acip-recs/general-recs/contraindications.html) and "Altered Immunocompetence" (www.cdc.gov/vaccines/hcp/acip-recs/general-recs/immunocompetence.html). For more details on COVID-19 vaccines, see "Use of COVID-19 Vaccines in the United States: Interim Clinical Considerations" at www.cdc.gov/vaccines/covid-19/clinical-considerations/covid-19-vaccines-us.html.

1. Are you sick today? [all vaccines]

There is no evidence that acute illness reduces vaccine efficacy or safety. However, as a precaution, all vaccines should be delayed until moderate or severe acute illness has improved. Mild illnesses with or without fever (e.g., otitis media, "colds," diarrhea) and antibiotic use are not contraindications to routine vaccination.

2. Do you have allergies to medications, food, a vaccine ingredient, or latex? [all vaccines]

Gelatin: If a person has anaphylaxis after eating gelatin, do not give vaccines containing gelatin. **Latex:** An anaphylactic reaction to latex is a contraindication to vaccines with latex as part of the vaccine's packaging (e.g., vial stoppers, prefilled syringe plungers, prefilled syringe caps). For details on latex in vaccine packaging, refer to the package insert (listed at www.fda.gov/vaccines-blood-biologics/vaccines/vaccines-licensed-use-united-states). **COVID-19 vaccine:** History of a severe allergic reaction (e.g., anaphylaxis) after a previous dose or to a COVID-19 vaccine component is a contraindication to use of the same vaccine type. People may receive the alternative COVID-19 vaccine type (either mRNA or protein subunit) if they have a contraindication or an allergy-related precaution to one COVID-19 vaccine type. Allergy-related precautions include history of 1) diagnosed non-severe allergy to a COVID-19 vaccine component; 2) non-severe, immediate (onset less than 4 hours) allergic reaction after a dose of any COVID-19 vaccine type (see Note). **Not contraindications: Eggs:** ACIP and CDC do not consider egg allergy of any severity to be a contraindication or precaution to any egg-based influenza vaccine. **Injection site reaction** (e.g., soreness, redness, delayed-type local-reaction) to a prior dose or vaccine component is not a contraindication to a subsequent dose or vaccine containing that component.

3. Have you ever had a serious reaction after receiving a vaccine? [all vaccines]

- Anaphylaxis to a previous vaccine dose or vaccine component is a contraindication for subsequent doses of the vaccine or vaccine component. (See question 2.)
- Usually, one defers vaccination when a precaution is present unless the benefit outweighs the risk (e.g., during an outbreak).

4. Do you have any of the following: a long-term health problem with heart, lung, kidney, or metabolic disease (e.g., diabetes), asthma, a blood disorder, no spleen, a cochlear implant, or a spinal fluid leak? Are you on long-term aspirin therapy? [MMR, VAR, LAIV]

LAIV is not recommended for people with anatomic or functional asplenia, a cochlear implant, or cerebrospinal fluid (CSF) leak. Underlying health conditions that increase the risk of influenza complications such as heart, lung, kidney, or metabolic disease (e.g., diabetes) and asthma are precautions for LAIV. **MMR:** A history of thrombocytopenia or thrombocytopenic purpura is a precaution to MMR. **VAR:** Aspirin use is a precaution to VAR due to the association of aspirin use, wild type varicella infection, and Reye syndrome in children and adolescents.

5. Do you have cancer, leukemia, HIV/AIDS, or any other immune system problem? [LAIV, MMR, VAR]

Live virus vaccines are usually contraindicated in immunocompromised people, with exceptions. For example, MMR vaccine is recommended and VAR may be considered for adults with CD4+ T-cell counts of greater than or equal to 200 cells/mL. See Note.

6. Do you have a parent, brother, or sister with an immune system problem? [MMR, VAR]

MMR or VAR should not be administered to a patient with congenital or hereditary immunodeficiency in a first-degree relative (e.g., parent, sibling) unless the patient's immune competence has been verified clinically or by a laboratory.

7. In the past 6 months, have you taken medicines that affect your immune system, such as prednisone, other steroids, or anticancer drugs; drugs for the treatment of rheumatoid arthritis, Crohn's disease, or psoriasis; or have you had radiation treatments? [LAIV, MMR, VAR]

Live virus vaccines should be postponed until chemotherapy or long-term high-dose steroid therapy concludes. See Note. Some immune mediator and modulator drugs (especially anti-tumor necrosis factor [TNF] agents) may be immunosuppressive. Avoid live virus vaccines in people taking immunosuppressive drugs. A list of such drugs appears in CDC's Yellow Book at www.wnc.cdc.gov/travel/yellowbook/2024/additional-considerations/immunocompromised-travelers.

8. Have you had a seizure or a brain or other nervous system problem? [influenza, Td/Tdap]

Tdap: Tdap is contraindicated in people with a history of encephalopathy within 7 days following DTP/DtAP. An unstable progressive neurologic problem is a precaution to using Tdap. For people with stable neurologic disorders (including seizures) unrelated to vaccination, vaccinate as usual. **A history of Guillain-Barré syndrome (GBS):** 1) **Td/Tdap:** GBS within 6 weeks of a tetanus toxoid-containing vaccine is a precaution; if the decision is made to vaccinate, give Tdap instead of Td; 2) **all influenza vaccines:** GBS within 6 weeks of an influenza vaccine is a precaution; influenza vaccination should generally be avoided unless the benefits outweigh the risks (e.g., for those at high risk for influenza complications).

9. Have you ever been diagnosed with a heart condition (myocarditis or pericarditis) or have you had Multisystem Inflammatory Syndrome (MIS-A or MIS-C) after an infection with the virus that causes COVID-19?

Precautions to COVID-19 vaccination include a history of myocarditis or pericarditis within 3 weeks after a dose of any COVID-19 vaccine or a history of Multisystem Inflammatory Syndrome (MIS-C or MIS-A). Myocarditis or pericarditis within 3 weeks after a dose of any COVID-19 vaccine is a precaution: the patient should generally not receive additional COVID-19 vaccine. A person with a history of myocarditis or pericarditis unrelated to vaccination may receive a COVID-19 vaccine once the condition has completely resolved. A person with a history of MIS-C or MIS-A may be vaccinated if the condition has fully resolved and it has been at least 90 days since diagnosis. Refer to CDC COVID-19 vaccine guidance for additional considerations for myocarditis, pericarditis, and MIS (see Note).

10. In the past year, have you received immune (gamma) globulin, blood/blood products or an antiviral drug? [MMR, VAR, LAIV]

See Note (schedule) for antiviral drug information (VAR, LAIV). See "Timing and Spacing of Immunobiologics" (www.cdc.gov/vaccines/hcp/acip-recs/general-recs/timing.html#antibody) for intervals between MMR, VAR and certain blood/blood products, or immune globulin.

11. Are you pregnant? [HPV, HepB, IPV, LAIV, MenB, MMR, VAR]

Live virus vaccines (e.g., LAIV, MMR, VAR) are contraindicated in pregnancy due to the theoretical risk of virus transmission to the fetus. People who could become pregnant and receive a live virus vaccine should be instructed to avoid pregnancy for 1 month after vaccination. **IPV and MenB** should not be given except to those with an elevated risk of exposure during pregnancy. **HepB:** HepB and PreHevBrio are not recommended during pregnancy, use Engerix-B or Recombivax-HB. **HPV** is not recommended during pregnancy.

12. Have you received any vaccinations in the past 4 weeks? [LAIV, MMR, VAR, yellow fever]

People given live virus vaccines, such as those listed above, should wait 28 days before receiving another live virus vaccine (wait 30 days for yellow fever vaccine). Inactivated vaccines may be given at the same time or at any spacing interval.

13. Have you ever felt dizzy or faint before, during, or after a shot?

Fainting (syncope) or dizziness is not a contraindication or precaution to vaccination; it may be an anxiety-related response to any injection. CDC recommends vaccine providers consider observing all patients for 15 minutes after vaccination. See Immunize.org's resource on vaccination and syncope at www.immunize.org/catg.d/p4260.pdf.

14. Are you anxious about getting a shot today?

Anxiety can lead to vaccine avoidance. Simple steps can help a patient's anxiety about vaccination. Visit Immunize.org's "Addressing Vaccination Anxiety" clinical resources at www.immunize.org/handouts.

VACCINE ABBREVIATIONS

HepB = Hepatitis B vaccine
HPV = Human papillomavirus vaccine
IIV = Inactivated influenza vaccine
ccIIV = Cell culture inactivated influenza vaccine

IPV = Inactivated poliovirus vaccine
LAIV = Live attenuated influenza vaccine
MenB = Meningococcal B vaccine
MMR = Measles, mumps, and rubella vaccine

RIV = Recombinant influenza vaccine
Td/Tdap = Tetanus, diphtheria, (acellular pertussis) vaccine
VAR = Varicella vaccine
